

Pushti Shah

San Diego, CA | (609) 349-0863 | pushah@ucsd.edu | linkedin.com/in/pushti11 | github.com/pushtishah11

EDUCATION

University of California, San Diego

B.S. Mathematics and Computer Science, Minor in Data Science | GPA: 3.9

La Jolla, CA

Expected May 2027

WORK EXPERIENCE

Paramount (CBS News)

New York, NY

AI Engineer Intern

June 2026 – August 2026

- Built a configurable risk-scoring engine in Python and PostgreSQL that ranks 1.9M archived video assets across six weighted factors, replacing a manual process for deciding what to digitize first; cut full-archive runtime to 134 seconds via batched bulk fetches.
- Added an LLM explanation layer using ChatGPT Enterprise that turns each asset's computed factor breakdown into a plain-English rationale and remediation step, prompt-constrained to the underlying data to prevent hallucinated reasoning, with response caching to control API cost and latency at scale.
- Designed and implemented a multi-branch AI video metadata pipeline using TwelveLabs, processing CBS News footage across 5 custom prompt configurations, generating per-segment visual subjects, per-story breakdowns, and IPTC Media Topic taxonomy tags, with structured output written to the internal media asset management system, replacing hours of manual archivist tagging across an 8PB archive.
- Architected a bi-weekly AI newsletter pipeline with parallelized RSS ingestion across 4 sources, Python-based article parsing, and GPT-4o generation, validated end-to-end via ChatGPT Enterprise and delivered as a PDF to senior stakeholders.

AutomatiqGPT.ai

San Diego, CA

Software Engineer Intern

Sept 2025 – Dec 2025

- Built and shipped reusable React + Vite UI components for a chat-based AI workflow platform with 500+ active users, designing consistent navigation patterns and authenticated user flows across the application, working within Agile/Scrum sprints.
- Implemented chat persistence and client-side state management using browser session storage to preserve conversation history and context across tab switches and page reloads, preventing unintended resets during active AI bot interactions.
- Integrated Auth0 authentication and Stripe-based subscription flows into the frontend, coordinating with backend APIs to manage login state, protected routes, subscription status, and asynchronous payment success and failure handling.

Youphoria (Wellness Startup)

San Diego, CA

Technical Product Manager

Sept 2024 – Sep 2025

- Built scalable survey pipelines and SQL/Python-based data workflows to automate user data collection, cohort segmentation, and behavioral analysis, reducing manual research effort by ~40% and enabling faster iteration on product features.
- Developed AI-driven personalization logic using recommendation heuristics and behavioral clustering techniques to generate tailored wellness insights and tracking features, contributing to ~25% growth in early user engagement.

Tenup Software Solutions

Gujarat, India

Machine Learning Intern

July 2025 – Sep 2025

- Built an NLP-based skill deduplication and clustering pipeline to normalize 10k+ platform skills in Python, grouping variants (e.g. "Python", "python3", "Python 3.11") into canonical entries and improving consistency of the platform's skill filters.
- Generated semantic embeddings for skill names using a pretrained language model and worked with HDBSCAN and K-Means to cluster semantically similar skills, iterating on preprocessing and clustering parameters to improve grouping accuracy on noisy data.
- Developed an incremental auto-promotion workflow for emerging skills that automatically integrates new clusters into the platform taxonomy, reducing manual updates by 40%.

PROJECTS

AI Search Engine for Document Parsing | Python, RAG, OCR, Faiss, LlamaIndex

San Diego, CA

- Designed and implemented modular AI pipelines to process 200+ page mortgage documents, leveraging Tesseract and PaddleOCR for text extraction and PyMuPDF for structured parsing, then integrated LlamaIndex and Faiss to accelerate retrieval by 15% with zero errors in key document insights.

Thyma: Hormonal Health Dashboard | React, Python, Firebase, Chart.js

San Diego, CA

- Developed a full-stack wellness platform with React, Supabase, and Auth0, integrating Chart.js/D3.js for interactive health visualizations (heatmaps, trendlines, symptom trackers) and Python/Express.js backend pipelines that power real-time, AI-driven insights for conditions such as PCOS and hypothyroidism.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C++, C, SQL, HTML, CSS, MATLAB

Frameworks & Libraries: React, Spring Boot, Pandas, NumPy, Matplotlib, Plotly, Scikit-learn, LlamaIndex, Faiss

ML, Systems & Tools: NLP, Embeddings, RAG, OCR, Data Visualization, Linux, Docker, Git, CI/CD, JIRA, Figma
